

VENDOR PERFORMANCE ANALYSIS

Archana M

Objective

- **Objective**
- The goal of this project is to analyze vendor sales, purchases, profitability, and brand performance to identify business insights and improve vendor decision-making.
- **Problem Statement**
- Businesses often struggle to identify:
- High-performing vendors
- Low-performing vendors
- Profitability trends
- Purchase contribution
- Brand-level sales performance

Dataset Overview

- **Dataset Used**

- Vendor sales and purchase dataset

- **Tables Used**

- Purchases
- Sales
- Purchase Prices
- Vendor Invoice

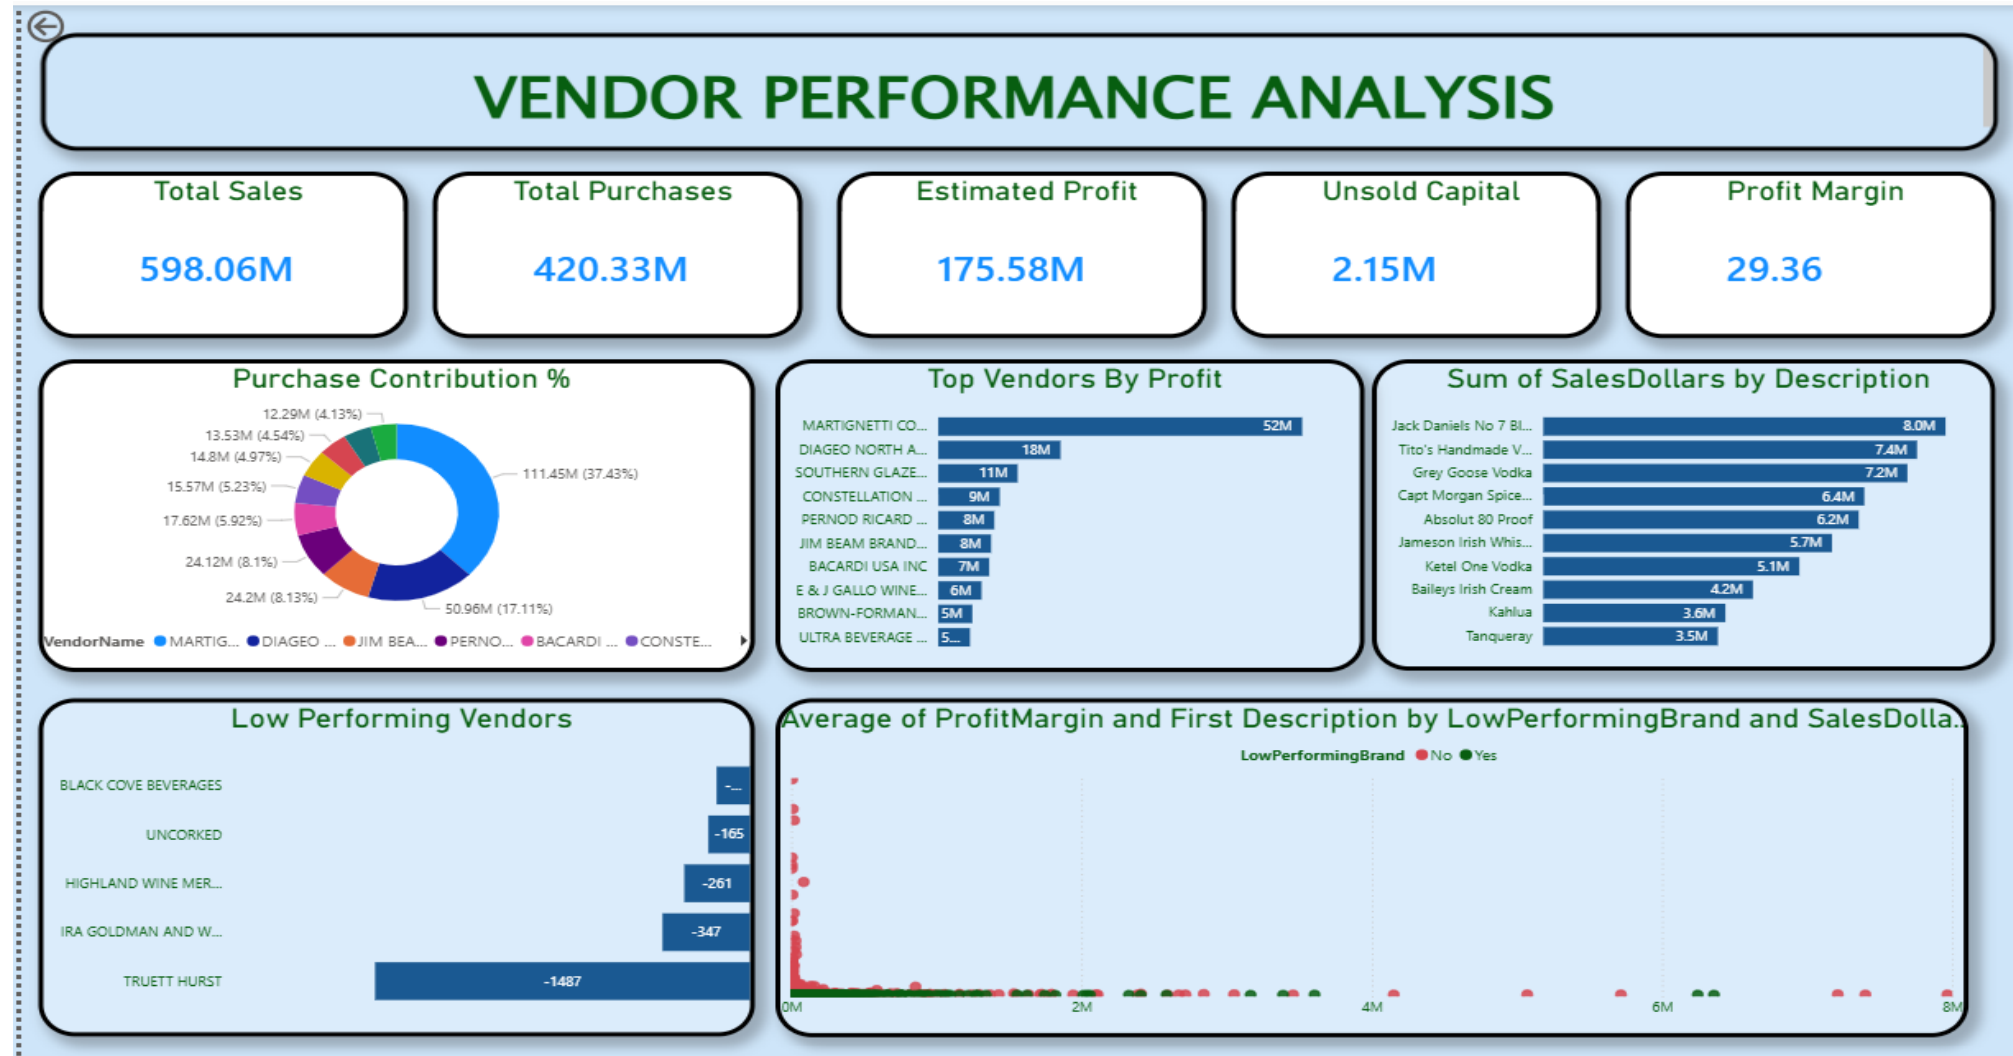

- **Important Columns**

- Vendor Number
- Vendor Name
- Sales Dollars
- Purchase Dollars
- Profit Margin
- Freight Cost
- Brand/Product Description

Project Workflow

- Data Collection
 - Data Cleaning using SQL & Python
 - Missing Value Handling
 - Data Aggregation & KPI Calculation
 - CSV Generation for Dashboard
 - Power BI Dashboard Creation
 - Business Insights Generation
-
- Raw Data → SQL → Python Cleaning → Power BI Dashboard → Insights

Dashboard Visualizations

Key Insights

- Identified top-performing vendors based on profit.
- Detected low-performing vendors using profit margin.
- Analyzed purchase contribution percentage.
- Evaluated brand sales performance.
- Measured vendor profitability trends.
